

HARD RULES (Immediate Action)

R01: Blacklisted Merchant

Logic: If the payment is going to a known "scammer" ID we've blocked before, we block it instantly.

R02: Velocity Burst

Logic: If a user tries to make 20+ payments in one hour, it's likely a bot or an automated attack.

R03: Impossible Travel

Logic: If you bought a coffee in Delhi at 9:00 AM and try to buy a phone in Mumbai at 9:15 AM, you'd have to be flying at 4,000 km/h. That's impossible, so we flag it.

R04: Active Account Takeover (ATO)

Logic: If someone just changed their password or logged in from a new city 2 minutes ago and is now trying to spend money, we stop it.

R05: Known Fraud Ring

Logic: If this account is linked to a group of known fraudsters we've flagged before, it's an automatic block.

RISK BOOST RULES (Score-Based)

R06: New Account + Big Spending

Logic: A brand-new account (under 30 days old) suddenly trying to spend ₹50,000+ is a classic sign of a "mule" account.

R07: High-Risk Category

Logic: Payments to gambling sites, crypto exchanges, or wire transfers are naturally more dangerous than buying groceries.

R08: Round Large Amounts

Logic: Criminals often move money in round numbers like exactly ₹5,000 or ₹9,000 to keep it simple. Real shopping usually has odd numbers (like ₹942.50).

R09: New Device + New IP

Logic: If a user is on a phone they've never used before AND an internet connection, they've never used before, it looks like a hacker.

R10: Midnight Shopping

Logic: A large transaction at 3:00 AM is suspicious because fraudsters hope the victim is asleep and won't see the SMS alert.

R11: Busy Day (Daily Velocity)

Logic: Most people make 2-3 payments a day. Doing 15+ in 24 hours is a red flag.

R12: Weekly Spend Spike

Logic: If you normally spend ₹2,000 a week and suddenly try to spend ₹20,000 in a single day, we notice the change.

R13: The "₹9,999" Trick (Structuring)

Logic: Banks have alerts for payments over ₹10,000. Fraudsters try to "structure" payments by doing several ₹9,999 transactions to stay under the radar.

R14: Rapid Repeat to One Person

Logic: Paying the same stranger 5 times in 10 minutes is a sign of "money laundering" or moving stolen cash quickly.

R15: Country Mismatch

Logic: If your UPI account is Indian but you are suddenly paying from an IP address in Russia or Brazil, we challenge it.

R16: The "Sleeping Beauty" (Dormant Account)

Logic: If a user hasn't touched their account in 3 months and suddenly tries to move a large amount of money, it could be a stolen old account.
